

User Management System — Requirements Specification

Project: Enterprise Portal v3.0 | Confluence Space: PROJ

1. User Registration

The system shall allow new users to register for an account. Users can sign up using their email address or social login providers.

1.1 Registration Fields

- Full name (first and last name)
- Email address
- Password
- Phone number (optional)
- Company name
- Role selection

1.2 Validation Rules

Email must be unique in the system. Password must meet security requirements. The system should validate all inputs.

2. Password Reset

User can reset password. The system sends a reset link to the user's email. User clicks the link and enters a new password.

2.1 Reset Flow

1. User clicks 'Forgot Password' on login page
2. User enters their email address
3. System sends reset email
4. User clicks reset link
5. User enters new password
6. System confirms password change

3. User Profile Management

Users should be able to update their profile information. The profile page should display user details and allow editing.

Editable fields:

- Display name
- Avatar/profile picture
- Bio/description
- Contact information
- Notification preferences
- Language settings

4. Role-Based Access Control

The system must support different user roles with varying permissions. Administrators can manage roles and permissions.

Role	Permissions	Description
Admin	Full access	System administrators
Manager	Read, Write, Approve	Team managers
User	Read, Write	Standard users
Viewer	Read only	External stakeholders

5. Notifications

The system should notify users about important events. Users can configure their notification preferences.

- Account-related notifications (registration, password change)
- System notifications (maintenance, updates)
- Activity notifications (mentions, assignments)
- Email and in-app notification channels

6. Audit Logging

All user actions should be logged for compliance. The audit log should be searchable and exportable.
